HOW CAN WE DO IT?

Our dedicated US forms production plant gives us the capability to clean, straighten, weld, powder-coat, and face all under one roof. Our powder coating keeps the frame rust-free for years under the harshest conditions. Choose from top grade 1/2" HDO or Exact2 Birch, machine riveted to the frame, giving you a strong, long-lasting, smooth-pouring surface that releases cleanly, and resists chipping and nail breakout. Edges are sealed with styrene acrylic sealer, resisting moisture, oil, alkali, and concrete adhesion.

4 head Jet wheelblast strips forms clean. Powder coated excellence: Wash, Dry, Paint, Cure. Your choice of first-quality facing is riveted to the frame.

- ✓ Forms sorted by wear and tear.
- ✓ Plywood stripped off, rivets ground out.
- ✓ Forms go through wheel-abrator to remove concrete, rust, chipped paint
- ✓ Wash raw forms to remove oils, contaminants
- ✓ Powder coat with ionic powder paint that covers the entire frame.
- ✓ Baked in an infrared oven where the paint molecules bond to the frame to form a single protective weather-resistant coating.
- ✓ Olympic brand HDO or optional Xact2 Birch is edge-sealed and machine-riveted to the frame.
- ✓ Refurbished forms are skidded, banded, and wrapped for shipment back.

***** Budget conscious customers can opt to remove plywood from the forms before sending in. Not only does it lower the per piece cost, but also saves on freight costs by reducing the inbound freight.*
